# Clyde, NC – Utility map: note on data gaps

Prepared by Anis Harmel, GIS consultant – October 20, 2026

**Deliverables:** web map (https://anis00.github.io/nc-utility-map/clyde/), GeoPackage in NC State Plane feet (EPSG:2264), GeoJSON copies (EPSG:4326), and a sources table. Every feature carries `source`, `source_date`, `capture_method` and `confidence`. Nothing was drawn without a source.

**Study area:** town limits (NCDOT) plus a 1-mile buffer, plus 1-mile corridors along I-40 and US-19/23/74 extending about 3 miles beyond town limits. Utility lines are kept to their end, even outside this area.

## Water and sewer

- **Mains come from Haywood County GIS** (Land Records Public Access, layers 33/34 water and 27/28 sewer): 152 water and 225 sewer segments, Town of Clyde and Junaluska. **The county lines have no pipe size, material, flow type or date.** Junaluska lines are a county reference layer; JSD ownership is unverified.
- **The county lines are incomplete.** Some streets inside the 2003 service areas have no mapped mains (for example Barefoot Ridge and nearby subdivision streets). In the address search, "None mapped within 500 ft" means no line in the source data, not necessarily no service.
- **Hydrants, manholes, storage tanks and lift stations are not mapped.** The Town confirmed its maps are paper only; its annual water survey map has no sizes, hydrants or tank sites. Sizes can be added to the existing lines when the Town plans are available.
- **Water supply:** no wells or intakes are registered for Clyde in the state water sources data. Clyde purchases its water; the new supply wells and the Clyde–Canton–Waynesville interconnection in the post-Helene state funding program are not yet in public data.
- **Sewer treatment:** in the 2003 data, Clyde's wastewater went to the Junaluska Sanitary District, which sent it to the Waynesville plant. Current arrangements should be confirmed with the Town and JSD.
- **2003 service areas** (NC Rural Center survey) are shown for reference only, with system figures for 2003 (population, connections, flows).

## Electric

- Service territories (HIFLD, source date 2023-08-01) are approximate. They show Haywood EMC, Duke Energy Progress and the Town of Waynesville. Confirm the provider for each address.
- Transmission lines (HIFLD) date mostly from 2014; all voltages are inferred by HIFLD. Substations come from OpenStreetMap and were checked on imagery.

## Broadband

- FCC National Broadband Map, June 30, 2025 data, fixed service reported by providers at census block level, not verified per address. Satellite service (available everywhere) is excluded. Some providers did not report speeds. Census blocks with no serviceable locations are labeled as unpopulated.

## Base data

- Parcels are county tax parcels (NC OneMap), not survey-grade. Address points are the county NG911 points. Town limits come from NCDOT and are not a legal survey.
